**ADD TO WALLET**

If there is an error in your information above, please contact your healthcare provider immediately.

# VACPASS

## **What is VACPASS For?**

VACPASS was created for users to show their vaccination status with ease and security.

Teaming together with your country's health database, we use only the necessary data to show your vaccinations.

## **Do I need to update my status?**

No, your status is updated automatically with the update of your health records. All you have to do is activate your account, and you're good to go!

## **How do I show my vaccination status?**

Press the "SHOW QR CODE" button on the home page for your custom QR code that can be scanned or displayed when you are travelling.

Press the "ADD TO WALLET" to add your VACPASS QR code to your smartphone's wallet application so you do not have to repeatedly access the app.
